

# Checklist & Best Practices

## Construction worker

### Get safety training

Any and all construction workers should have full awareness of possible hazards and safety tips prior to entering the site.

### Proper on-site equipment

To form a work culture centered around construction site safety, you must provide workers with adequate work equipment.

### Have properly trained and designated machine operators

Another best practice for construction safety is having designated heavy equipment operators who undergo special training.

### Implement good housekeeping practices

Housekeeping practices imply that a workplace is kept in an organized, uncluttered, and hazard-free condition.

### General building checks

Materials and products should be matched to what was specified.

### Roofing

All roofing must be laid straight, true and fixed correctly.

### Windows joinery

Ensure the windows and sliders the correct size and design on delivery.

### Gutters and downpipes

Ensure the gutters have the correct fall, so that there is no pooling of water.

### Wiring and lighting

Make sure enough power points are there and should be in the right positions. They should be installed evenly on the walls.
